32	21-1377	*PTC PCR DNA Extraction and Amplification Kit with 0.2-mL Tubes: This kit explores the molecular basis of the inherited ability to taste the bitter chemical phenylthiocarbamide (PTC), which was first described in the 1930's by Cold Spring Harbor Laboratory scientist Albert Blakeslee. Students determine their ability to taste PTC using taste paper. They then use safe saline mouthwash and Chelex extraction to obtain a sample of their own DNA and amplify a 221-nucleotide region of the PTC taste receptor gene. The 2 alleles differ by a single nucleotide. so restriction digestion of the amplified	4	kit	\$217.00	\$868.00		\$0.00

325	15V2226	VWR Tip Reload System,100-1250 µL, Racked (10 x 96). These comprehensive systems feature tips with a transparent, thin wall plastic design in a universal tip that fits most brands of micropipets. Tips are RNase/Dnase and DNA free and available in three configurations. All racks include a lid lip for stable stacking and a flip lock for easy open and close. The 96 well multi-channel format rack includes 10 racks of 96 per pack. The reloading operation features sleeve alignment which orients loading for a perfect fit every time. The tongue	3	cases		\$0.00		\$0.00
326	813302	Altay Reflex Arc Model. Ideal for illustrating the complete nerve impulse path involved in a reflex, this one piece model provides a comprehensive view of the reflex arc — from the receptors inside the skin (enlarged 100X), through the sensory neuron, to the spinal cord (enlarged 6X) then back through the motor neuron to the enervated skeletal muscle tissue (life-sized). The base mounted model also offers stability and durability. Included key	1	each		\$0.00		\$0.00
327	815082	Altay Human Cranial layers Model. This model shows the stratification of the human cranium, revealing details of internal structures from the skin to the cerebral white	1	each		\$0.00		\$0.00

329	BioRad # 166-5035 EDU	*BioFuel Enzyme Kit Reveal the power of enzyme kinetics by illustrating their function through the real-world application of biofuel production. This kit allows students to measure the enzymatic activity of cellobiase (part of the cellulase family) and identify the optimal conditions for the enzyme. The reaction of cellobiase breaking down cellobiose is important in the process of making cellulosic ethanol, which is an efficient, more sustainable fuel to replace petroleum. Students test and calculate the conversion rate of a sugar substrate (p–nitrophenyl glucopyranoside) to p–nitrophenol and glucose in the presence or absence of cellobiase. One	1	kits		\$0.00		\$0.00
