32	21-1377	<p>*PTC PCR DNA Extraction and Amplification Kit with 0.2-mL Tubes: This kit explores the molecular basis of the inherited ability to taste the bitter chemical phenylthiocarbamide (PTC), which was first described in the 1930's by Cold Spring Harbor Laboratory scientist Albert Blakeslee. Students determine their ability to taste PTC using taste paper. They then use safe saline mouthwash and Chelex extraction to obtain a sample of their own DNA and amplify a 221-nucleotide region of the PTC taste receptor gene. The 2 alleles differ by a single nucleotide, so restriction digestion of the amplified product followed by gel electrophoresis effectively differentiates the 2 alleles. One allele strongly correlates to the ability to taste PTC. After scoring their SNP genotypes, students determine how well the SNP genotypes actually correlate to tasting. No substitution allowed: Must be Carolina Biological. <u>WE WILL CALL FOR AS NEEDED.</u></p>	4	kit

209	BioRad # 166-5035 EDU	<p>*BioFuel Enzyme Kit Reveal the power of enzyme kinetics by illustrating their function through the real-world application of biofuel production. This kit allows students to measure the enzymatic activity of cellobiase (part of the cellulase family) and identify the optimal conditions for the enzyme. The reaction of cellobiase breaking down cellobiose is important in the process of making cellulosic ethanol, which is an efficient, more sustainable fuel to replace petroleum. Students test and calculate the conversion rate of a sugar substrate (p-nitrophenyl glucopyranoside) to p-nitrophenol and glucose in the presence or absence of cellobiase. One complete 45-minute core activity plus five additional enrichment activities enable instructors to tailor coursework across several disciplines at a variety of levels.</p> <p>Kit includes materials for eight student workstations with 2-4 students per group. Aligns with AP Biology Big Idea 4. Includes Teacher's Guide, Student Manual, and Graphic Quick Guide. <u>WE WILL CALL FOR AS NEEDED</u></p>	1	kits	
210	365202	<p>*Bio-Rad pGLO™ Bacterial Transformation Kit (#166-0003EDU) Renowned as a premier name in biotechnology education, Bio-Rad Laboratories offers research-level lab activities that are easily accessible to high school and college students</p> <p>In the pGLO bacterial transformation kit, students transform bacteria with a gene from a bioluminescent jellyfish to express a new protein, green fluorescent protein (GFP). They can turn the genes on and off to study gene regulation. This same procedure is used for creating "designer proteins" and has led to the explosion of new medicines, agricultural applications, and environmental solutions. Aligned with AP Biology Lab 6, this lab can be completed in two 45 minute lab sessions. Includes materials for eight setups. <u>MUST BE BIO RAD; WE WILL CALL FOR AS NEEDED</u></p>	2	kits
