| 38   | 21-1377  | *PTC PCR DNA Extraction and Amplification Kit with 0.2-mL Tubes: This kit explores the molecular basis of the inherited ability to taste the bitter chemical phenylthiocarbamide (PTC), which was first described in the 1930's by Cold Spring Harbor Laboratory scientist Albert Blakeslee. Students determine their ability to taste PTC using taste paper. They then use safe saline mouthwash and Chelex extraction to obtain a sample of their own DNA and amplify a 221-nucleotide region of the PTC taste receptor gene. The 2 alleles differ by a single nucleotide, so restriction digestion of the amplified product followed by gel electrophoresis effectively differentiates the 2 alleles. One allele strongly correlates to the ability to taste PTC. After scoring their SNP genotypes, students determine how well the SNP | 4  | kit  | \$173.67   | \$694.68   |   | \$0.00     |

| 77   | 566928          | Altay Human Male Urinary System Model. This 5-part model shows the major components of the urinary system, including sections of the inferior vena cava and the abdominal aorta. The right kidney is dissected to reveal the cortex, medulla, pyramids, calyces, pelvis, and origins of the renal artery and vein. The bladder can be opened to show the mucosa, trigone, urethra, seminal vesicles, ejaculatory ducts, and vas deferens. With key. Mounted on a durable polymer base. Size, 25 x 18 x 36 cm. | 1 each  |  | \$453.14 | \$453.14   |            | \$113.03  | \$113.03   |
| 78   | 566644          | Altay Miniature Human Muscular Figure. Compact, highly detailed human figure gives excellent overview of superficial musculature. All muscles are positioned and sized to correct scale. Mounted on a durable polymer base. Includes numbered key with 51 identified structures. Size, 25 x 18 x 40 cm.   | 3 each  |  | \$50.40  | \$151.20   |            |   | \$0.00     |

| 119  | Edvotek #300 | *Blue/White Cloning of a DNA Fragment and Assay. When DNA is subcloned in the pUC polylinker region, β-galactosidase production is interrupted, resulting in the inability of cells to hydrolyze X-Gal. This results in the production of white colonies amongst a background of blue colonies. This experiment provides a DNA fragment together with a linear plasmid and T4 DNA Ligase. Following the ligation to synthesize the recombinant plasmid, competent E. coli cells are transformed and the number of recombinant antibiotic resistant white and blue colonies are counted. β-galactosidase activity is assayed from blue and white bacterial cells. This experiment can | 8  | kit | \$169.95   | \$1,359.60 | \$179.86  | \$1,438.88 |
